

Muhammad Talha

18 May, 2026

Dear Hiring Manager / Recruitment Team,

I am a final-year **BS Cyber Security** student at **Air University**, Islamabad, graduating in **June 2026**, and I am writing to express my strong interest in joining your organization as a cybersecurity professional. With hands-on experience in penetration testing, digital forensics, network security, and secure system design, I am confident in my ability to contribute meaningfully to your security operations from day one.

Over the past year, I have gained practical cybersecurity experience through professional industry work and research-focused projects. At Tech Quadrant Pvt Ltd, I conducted security research on RF, wireless, and UAV communication systems, performed threat modeling and attack surface analysis, and contributed to the development of secure mesh networking architectures using encrypted communication protocols. I also worked with AES encryption, ECDH-based secure key exchange, and AI-driven intrusion detection concepts for distributed airborne communication systems. Previously, at Cyborts, I carried out forensic disk imaging, IOC analysis, and delivered structured investigation reports aligned with incident response standards. These experiences provided me with real-world exposure to both offensive and defensive cybersecurity operations, strengthening my ability to work in technical environments, solve complex security challenges, and communicate findings effectively under pressure.

For my Final Year Project, I led the development of **AEGIS-LN** - an AI-protected LoRa mesh communication system built on dual ESP32-S3 architecture. The system integrates ECDH key exchange, AES-128-CBC encryption, HMAC-SHA256 authentication, and a three-stage AI firewall for real-time threat detection, achieving a false-positive rate below 3%. This project reflects my ability to apply both theoretical knowledge and practical engineering skills to solve complex, real-world security challenges.

I hold six industry certifications including **ISO/IEC 27001:2022**, **CSEDP (The SecOps Group)**, and **CAISR (Red Team Leaders)**, and I am proficient with tools including Kali Linux, Metasploit, Burp Suite, Wireshark, Nessus, Autopsy, and FTK Imager. I bring a structured, analytical approach to security challenges and am committed to continuous professional development in an ever-evolving threat landscape.

I would welcome the opportunity to discuss how my background, skills, and drive can add value to your team. I am available immediately upon graduation and open to full-time positions, rotational programs, or graduate schemes in cybersecurity and information security. Please find my CV attached for your reference.

Yours sincerely,

Muhammad Talha
